

KENTICO QUALITY

CHECK-UP REPORT

Our Kentico Website Quality Check-up is a deep dive into your website from a marketing, code, and infrastructure standpoint. Our team of expert marketers, developers, and cloud infrastructure engineers examine the health of your Kentico website and then walk you through four in-depth documents that offer recommendations for improvements, compliance and best practices which include the next steps to ensure your site continues to facilitate the success of your business goals and initiatives.

CURV WEBSITE ASSESSMENT

Our marketing experts rate the effectiveness of your website for: Content, Usability, Reach, and Visual Design.

KENTICO QUALITY AUDIT

Our Kentico Certified web developers perform a quality audit of your site, which will reveal opportunities for code optimization and possible upgrade needs. This evaluation includes a look at the use of best practices for Kentico development and deployment of your site. We examine your infrastructure and software development lifecycle for development, staging, and production environments including the need for high availability.

WEBSITE INFRASTRUCTURE EVALUATION

Our infrastructure engineers will determine the infrastructure needs of your site in its current state, and then establish how to improve the performance and scalability based on your business needs.

RECOMMENDATIONS ESTIMATE

Our team will provide a full list of recommendations based on their findings and an estimate that will allow your company to prioritize the needs of your website based on your budget.
